

WORKSHOP: ASKIA

In this workshop, conducted by Corporate Software, member of SPIE Switzerland, you will gain an in-depth understanding of **your future and own corporate AI** in detail: how ASKIA works and how you can use the AI chatbot effectively.

To enable you to use ASKIA directly and securely in your company, our experts provide you with in-depth knowledge of modern AI technologies and guide you through practical exercises for the quick and productive deployment of your own corporate AI.

Theory: understanding how AI works

- How do AI models work with tokens and prompts?
- What does context-based text generation mean?
- What role do models like GPT play?
- Which Azure components are used, and how do they interact?

Practice: discover your own AI in action

- Joint implementation of ASKIA in your tenant
- Setting up the user interface with role-based access
- Possible connection to additional internal company data sources
- Configuring ASKIA and conducting initial training with your data
- Integration of the Internet Agent for up-to-date information
- Performing your first tests and prompts in the live system

We provide this directly to you:

- **Comprehensive Understanding:** AI becomes tangible for you and your team.
- **Maximum Security:** We show you how your data is processed within your Azure environment.
- **Application Expertise:** You and your team can immediately test ASKIA and gain first-hand experience.

Targeted Audience: Power users, system administrators, and decision-makers in both technical and functional areas.

SPIE ICS AG is your independent service partner in Switzerland for solutions around AI and data.
