

Orchestrate your needs in perfect harmony with your organisation. With **cello:secure.GATE**, you have the instrument you need to tailor interactions with your users, and you can count on security, simplicity and clearly defined costs as you do so.

An acclaimed orchestra

With **cello:**, our standard managed services for IT, we are adding a new string to our bow. In addition to increased solution availability, you will benefit from reduced initial and renewal investment needs, and predictable costs throughout the contract period.

Your first line of defence:

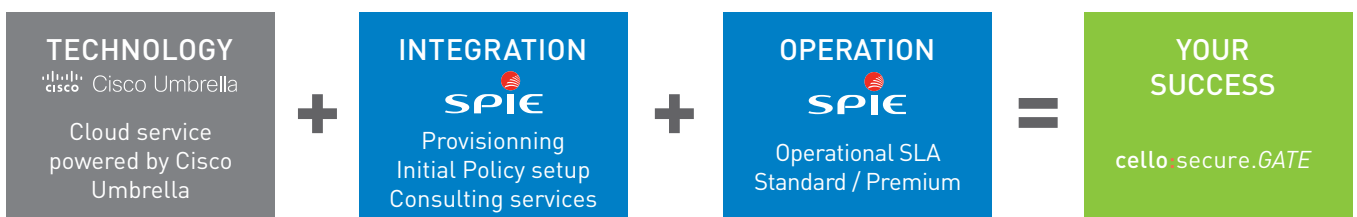

- **cello:secure.GATE** is a cloud service that protects all of your equipment, both within the company itself and for mobile clients.
- Serves as the first line of defence by using Cisco Umbrella's DNS protection technology.
- This cloud solution offers high levels of security.

Tailored to your needs

The functions of **cello:secure.GATE** allow you to protect your employee and other critical data. This is how the music plays:

- **You only pay for what you use**, with a flexible monthly charge. You will not have to purchase any assets and will therefore have no investment costs (CAPEX).
- **Quick activation and flexible deployment.**
- A designated **service manager** serves as your point of contact (SPOC) for advice, change planning and monitoring.

THE BENEFITS FOR YOU
Operation <ul style="list-style-type: none"> • Increased availability • Optimum security • Flexible architecture • Constant service evolution
Customer Service Portal <ul style="list-style-type: none"> • Integration into service centre • Customer request tool • Online dashboard
Finances <ul style="list-style-type: none"> • Reduced operating costs • Easily calculable IT costs • No blocking of capital

With cello: you can count on

Security

Simplicity

Profitability

Our solution

ONE SINGLE PACKAGE - INCLUDES ALL YOU NEED

INSIGHTS

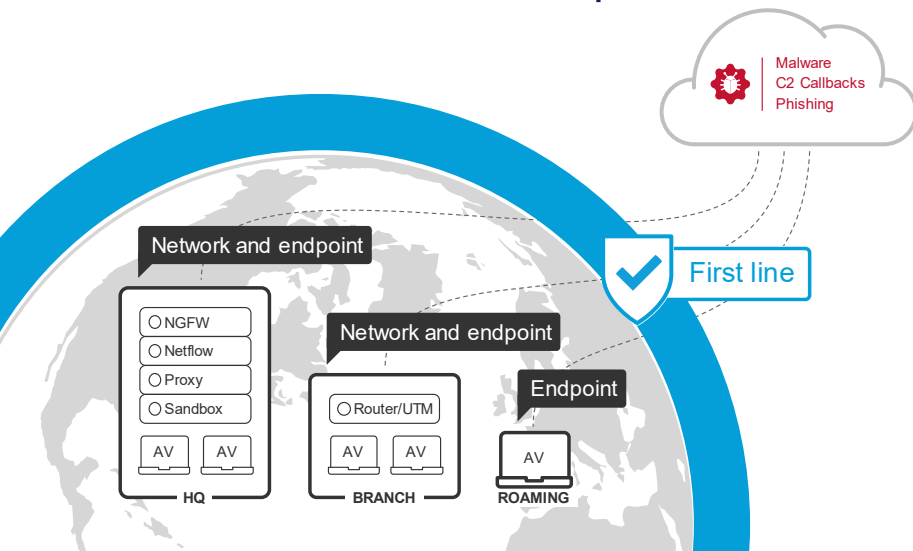

- Block ransomware, malware, phishing, and C2 callbacks
- Protect users anywhere they go, on and off the corporate network
- Stop malicious domain requests and IP responses at the DNS-layer, over any port or protocol
- Real-time, enterprise-wide activity search & scheduled reports
- Enforce acceptable use policies using 80+ content categories
- Create custom block/allow lists
- Block direct IP connections at the IP-layer
- Identify targeted attacks by comparing local vs. global activity
- Manage shadow IT and cloud use by discovering apps and providing vendor and risk details, plus blocking risky apps
- Enforcement & visibility per internal network or AD user/group
- Proxy risky domains for URL and file inspection using AV engines and Cisco Advanced Malware Protection (AMP)
- Retain logs with Amazon Web Services integration using customer-managed or Cisco-managed S3 bucket

PRICE PER NUMBER OF USERS

- Flexible cloud services, 'you only pay for what you use'
- An SLA and one single bill within a consolidated global package
