

SPIE Smart Parking Manager is a tailor-made solution to address specific customer needs of analytics and alerting regarding their private parking.

SPIE continually adapts our services and solutions to meet customer needs, and this is also the case with Smart Parking Manager.

ENDLESS POSSIBILITIES

This IoT based solution, provides a clear view of your parking occupancy, and using innovative technology allows you to do much more. Site management with real-

time reporting on your visitor places linked to your digital signage system is just one of the many benefits. Engineered with accessible and open API interfaces, the possibilities are endless. This unique SPIE solution is designed to adapt to each customer use case to provide optimal value.

Entrance Control

Detect when vehicles are stuck at entrance/exit.

Rented zone enforcement

Control rental space occupancy and send notifications on potential infractions.

Truck entrance control

Detect and advise when a truck is waiting or stuck for too long at the entrance.

Electric Vehicle places

Monitor and manage EV parking places.

Visitors

Monitor and manage the visitor places.

Prohibited parking zones

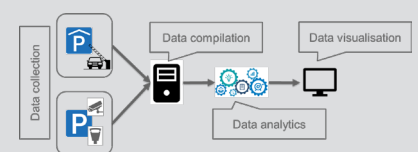

Monitor and manage prohibited parking areas.

Abandoned vehicles

Detect abandoned vehicles or send notification when parking duration is exceeded.

THE SOLUTION IN A BRIEF

- Smart Parking Manager is the foundation of your private parking management.
- Starting from simple occupancy to complex event scenarios and automated processes.
- Transform your parking area into a welcoming and smart efficient place.
