

**TRUSTMETRIC: RATE, MANAGE, IMPROVE**  
**RELIABLE** ASSESSMENT,  
**PROACTIVE** IDENTIFICATION,  
**CONTINUOUS** IMPROVEMENT.

In our digitally networked world, confidence in the integrity and security of our systems is of paramount importance. TrustMetric is an innovative risk-assessment service that provides accurate insight into the complex ecosystem of trust and security in the cybersphere.

TrustMetric is an indispensable tool for improving and strengthening your cyber security. Our service enables the measurement and continuous improvement of cyber maturity, identifies potential vulnerabilities and provides targeted recommendations for improvement.

**Cybersecurity assessment** is becoming **as important as credit rating** in the risk assessment of existing and new business relationships.

 SPIE ICS AG

The analysis takes into account a wide range of publicly available information, as would be available to potential attackers.

Thanks to the automation of the assessment process, companies save costly resources and can strategically improve their security measures.

With TrustMetric, you not only proactively identify vulnerabilities, but also prioritise security measures and automatically compare your cyber maturity against industry standards.

**THE ADVANTAGES AT A GLANCE**

- Proactively identify of vulnerabilities
- Get a reliable assessment of your cyber maturity
- Compare your cyber maturity with that of other organisations
- Prioritise security measures for continuous improvement of cyber security
- Support with risk assessments for business relationships
- Saves resource with the automated assessment process
- Create detailed reports with insights and suggestions for improvement
- Invest in the security of the digital ecosystem

**ABOUT SPIE ICS**

Our values (performance, proximity and responsibility), our comprehensive solution portfolio and our established processes make us the ideal partner for companies of any size.

As one of the few providers in Switzerland, we offer you first-in-class geographic coverage, around the globe and right at home.

Our services are based on industry best practices, current certifications and modern process-oriented methodology.

## ECOSYSTEM OF TRUST

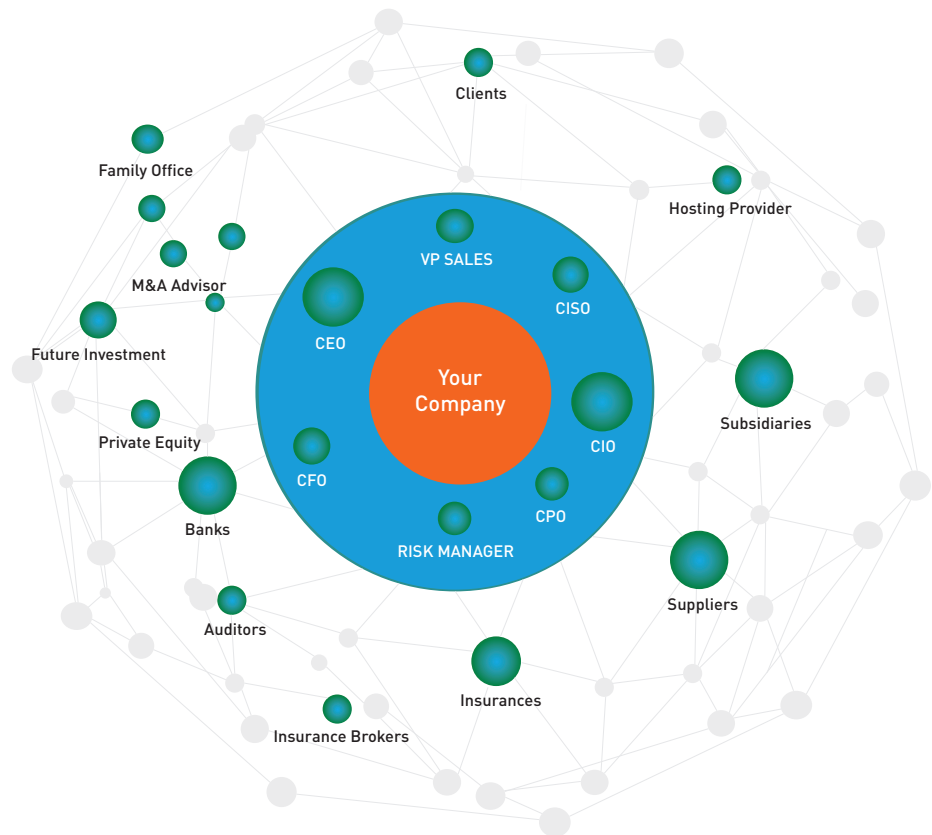

TrustMetric is designed to give companies an accurate insight into their cybersecurity ecosystem of trust.

With the purchase of a TrustMetric licence, an organisation gains the ability to audit itself or another organisation (partners, suppliers, customers, etc.) on a daily basis for a period of 365 days. This continuous auditing and assessment enables the TrustMetric users to get a precise overview of their cybersecurity situation. The data obtained in this process is prepared and analysed in detailed reports.

## SIX AREAS OF ANALYSIS

TrustMetric focuses on a wide range of analysis areas, including WEB-TLS/SSL, messaging, cybersecurity controls, vulnerabilities, attack surface and cyber incidents. All this information is publicly available, just as it would be to potential hackers.

These reports provide key insights into potential vulnerabilities and risk areas that serve as the basis for targeted improvements. In addition to these comprehensive reports, TrustMetric offers concrete suggestions for improvement that are based on the vulnerabilities identified in the reports and current cybersecurity

best practices and standards. In this way, TrustMetric enables companies not only to understand their current security situation, but also to take concrete steps to improve their cybersecurity strategy.

In summary, TrustMetric is a **valuable investment in the security of your digital ecosystem.** It is therefore an indispensable tool for **improving digital trust** in your organisation.

### RATE

Find out how your ecosystem stacks up in terms of cyber maturity.

### MANAGE

Operate with confidence in the digital world to optimise your security practices.

### IMPROVE

Improve the performance and security of your ecosystem.
